

# Data Center Modernization

From Enterprise to Federal Agency, the need to streamline the footprint, resource consumption, budget requirements and excess capacity in data centers is at an apex. Hardware costs remain stable, encouraging more unit-sales, but the ongoing operations and maintenance costs that buyers incur are growing. The diminishing returns left by data center sprawl, not to mention increasing public and regulatory awareness to Sustainability impacts, has forced both buyers and providers to respond.

Modern Data Centers are an organic extension of the business need to leverage and consume agile software services that will reliably drive revenue and revenue growth as the current market requires. The days of the static datacenter are limited, as organizations continue to execute on data center modernization strategies.

While data center technologies are increasingly modular, converged and even commoditized, MBS knows how to design, build, provision and manage flexible solutions for your dynamic business needs.

## Data Center Management

At the heart of understanding our client’s data center needs, lies our experience in managing them ourselves, in North America, South America, Asia Pacific and Europe where we provide:

- Data Center Consolidation and Migration
- Monitoring & System Administration
- Media Management
- Co-Location Management
- Asset Management
- Power Governance
- Problem Management & Trend Analysis
- System Administration
- Help Desk Level 1-2-3 [SPOC]
- Security and Network Administration

## Data Center Provisioning

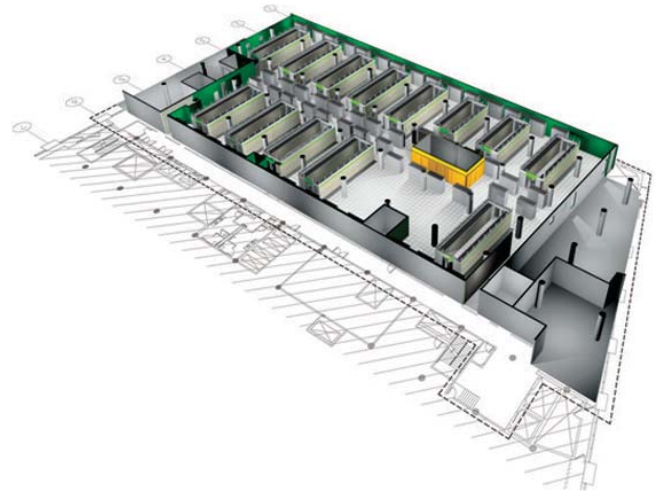

MBS leverages our direct alliances with key infrastructure providers and channel partners to provide our clients with the best price/performance for their infrastructure and systems transformations. Depending upon the needs of your new data center environment, MBS can provision the necessary networking, server, storage and software.

## Data Center Design and Build

MBS provides design and build services to support your data center consolidation and modernization initiatives. Our services include:

- Concept Planning
- Energy Efficiency Analysis
- Basic Capacity Service Needs
- Infrastructure Condition & Capacity Analysis
- Thermal Assessments
- Operational Risk Assessments
- Data Center Build Out
- Residual Asset Value Capture

## Managed Business Solutions
